

NEW BOARD DESIGN

TW2 & AQ2100/2400

The operation of the new boards for the customer is the same as the TW2 or AQ2100/2400 meaning the customer will not be required to learn a new controller.

The new board design replaces the Micro, Power & Connection Boards with 1 main board and 1 Daughter Board and keeping the Display Board and the Transformer Assy.

The Main board is designed to fit onto the fixings in either the TW2 or AQ2100/2400

The Daughter board plugs on to the display board as did the old Micro board

The boards come in either single or four zone.

Remote control is also available via Radio with an interface or mobile phone, but will require a remote mode select switch.
